

S2

Tablet Cart

About the Tryten S2

1 SIMPLIFIED TABLET CART

By removing the articulating arm, the S2 provides much of the functionality of the S1 tablet cart, at a lower cost. For certain applications height adjustability is not required, making the S2 an ideal solution. The tablet bracket is shared with the S1, meaning the same compatibility, security, and rotation is available with both carts.

2 MULTIPLE ACCESSORY OPTIONS

The Tryten S2 Tablet Cart comes with multiple accessory options, including a scanner holder, a basket, and a keyboard tray. This makes it a versatile solution for a wide range of medical tasks.

3 VESA MOUNTING OPTION

When a client needs a monitor, all-in-one computer, or custom device mounted to a simple cart the tablet bracket can be replaced with a VESA mount, opening up a wide range of device options.

4 IMPROVED WORKFLOW EFFICIENCY

The Tryten S2 Tablet Cart is designed to improve workflow efficiency in healthcare settings. Healthcare professionals can easily move the cart to the patient's bedside and access the necessary information, reducing the need for back-and-forth trips to a stationary workstation.

5 VARIETY OF APPLICATIONS

The Tryten S2 Tablet Cart, like all Tryten carts, are a valuable tool for telehealth consultations. Healthcare professionals can use the cart to bring a tablet to the patient's bedside, allowing for remote consultations and virtual care.

Most Common Use Cases

- Telehealth
- Patient Registration
- Virtual Visiting
- VRI (Video Remote Interpreting)
- Virtual Rounding
- Nursing Assistance
- Monitor Mounting (VESA Mount Req.)
