- 27 Nervus alveolaris inferior

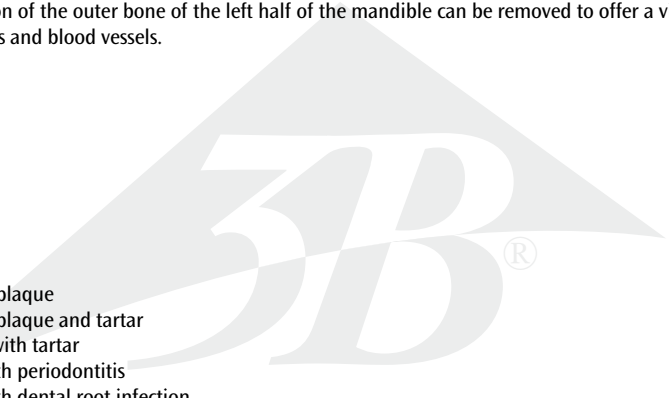

The model D26 Dental Diseases is based on a mandible with the 16 permanent teeth of an adult enlarged two times. Each tooth can be removed.

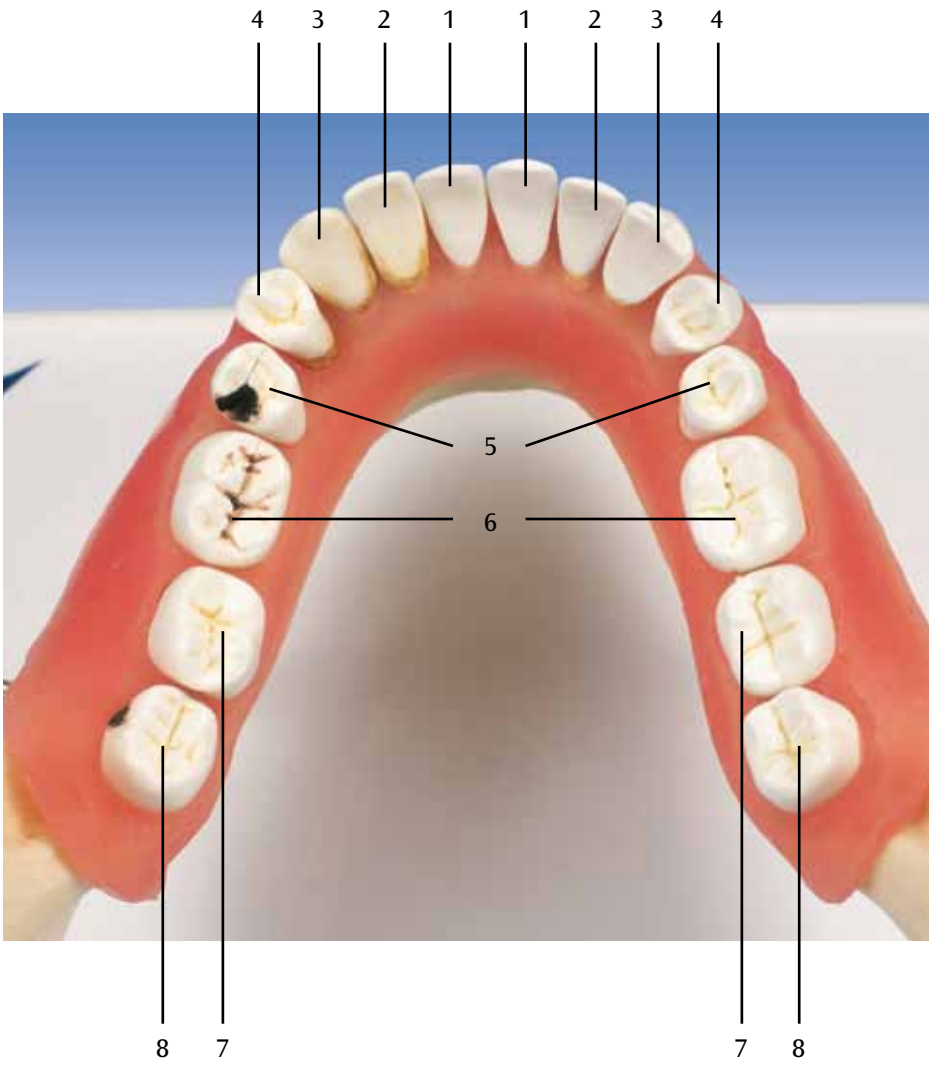

The right mandible half shows 8 healthy teeth with healthy gums.

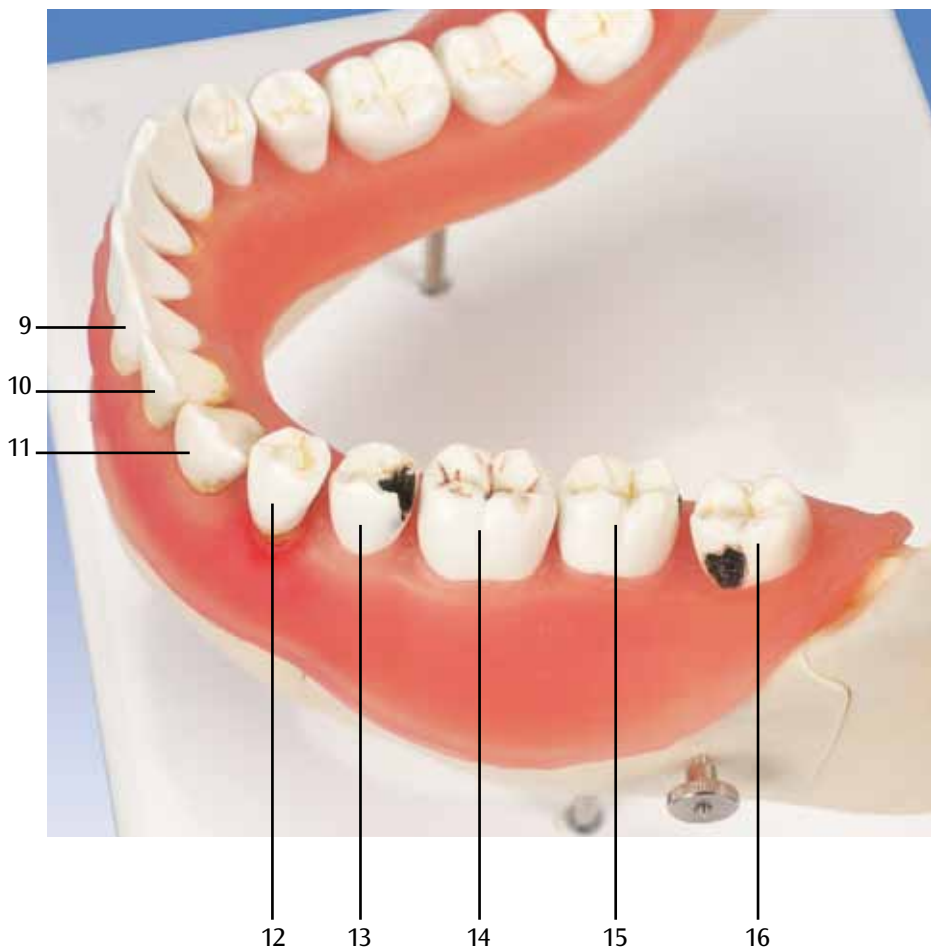

The left mandible half portrays various dental diseases:

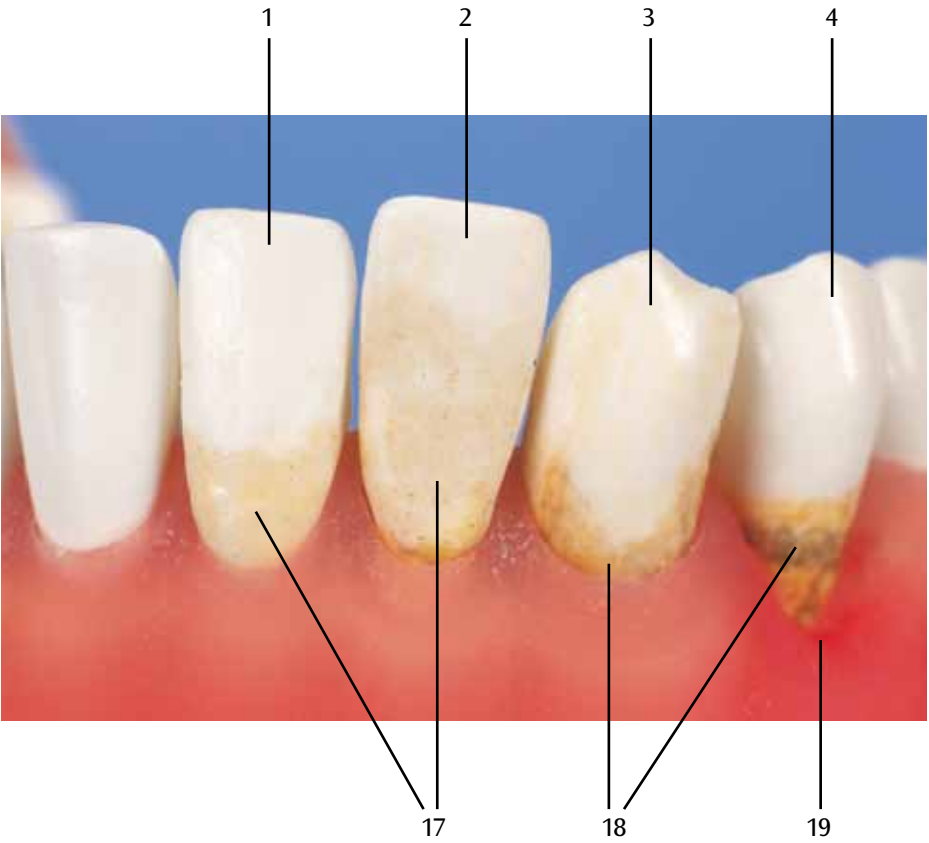

- Incisor 1 with plaque
- Incisor 2 with plaque and tartar
- Canine tooth with tartar
- Premolar 1 with periodontitis
- Premolar 2 with dental root infection, separable in 2 parts
- Molar 1 with fissural caries, separable in 2 parts
- Molar 2 with approximal caries
- Molar 3 with smooth-surface caries.

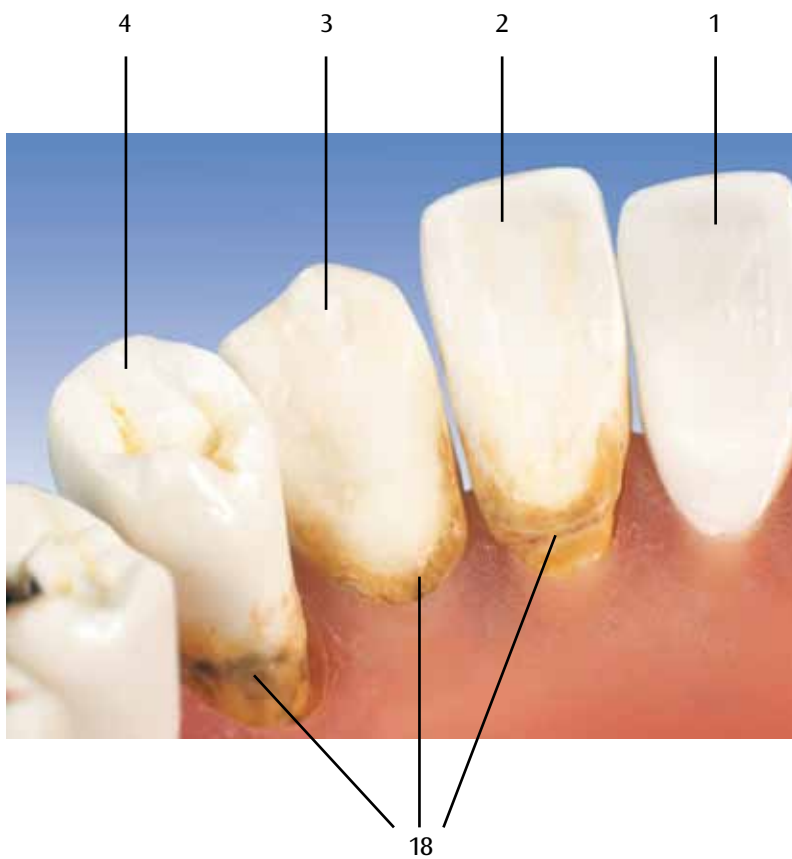

In addition, a section of the outer bone of the left half of the mandible can be removed to offer a view of the course of the nerves and blood vessels.

- 
- 1 Incisor 1
 - 2 Incisor 2
 - 3 Canine tooth
 - 4 Premolar 1
 - 5 Premolar 2 (A)
 - 6 Molar 1 (B)
 - 7 Molar 2
 - 8 Molar 3
 - 9 Incisor 1 with plaque
 - 10 Incisor 2 with plaque and tartar
 - 11 Canine tooth with tartar
 - 12 Premolar 1 with periodontitis
 - 13 Premolar 2 with dental root infection
 - 14 Molar 1 with fissural caries
 - 15 Molar 2 with approximal caries
 - 16 Molar 3 with smooth-surface caries
 - 17 Dental plaque
 - 18 Dental calculus (tartar)
 - 19 Gingivitis (infected receding gums with gingival sulcus)
 - 20 Dental caries
 - 21 Enamel
 - 22 Dentine
 - 23 Dental pulp
 - 24 Fissural caries
 - 25 Inferior alveolar artery
 - 26 Inferior alveolar vein
 - 27 Inferior alveolar nerve
